Liani Ovalles

Junior Software Engineer | C# Developer

xcape.worlds@gmail.com Software engineering portfolio github.com/xcapeworlds-cloud

Professional summary

Entry-level C# developer with project experience in .NET applications, Unity gameplay systems, and a published iOS puzzle game. Comfortable breaking down features, debugging unexpected behavior, and testing changes. Seeking a junior software engineering or C# development role with opportunities to learn and contribute.

Technical skills

Languages: C#

Development: .NET 8, console applications, class libraries, Unity, object-oriented programming, input validation, gameplay AI, debugging

Testing: Automated assertions, manual testing, bug reproduction, multiplayer troubleshooting, feature verification

Tools: Git, GitHub, GitHub Actions

Project experience

Progression Engine | .NET 8 Console Application

Independent portfolio project

- Built a standalone C# console application and reusable class library for deterministic reward and upgrade calculations.
- Separated business rules from user input, with explicit validation and checked arithmetic.
- Wrote 13 automated assertion cases and configured a GitHub Actions build-and-test workflow.

Sugar.io | Unity and C# Gameplay Systems

Independent development | 2021 to present

- Developed gameplay systems for a candy-themed tornado arena prototype in Unity and C#.
- Worked with AI opponent behavior, target selection, obstacle avoidance, and stuck recovery.
- Implemented or worked on tornado movement, collision handling, growth, combat, and destructible environment interactions.

- Organized a 29-script source showcase with architecture notes and repository integrity checks.

How Far Can You Ramp? | Multiplayer Systems

Independent Unity / visual scripting project

- Developed distance-based rewards, speed upgrades, rebirth progression, and randomized rewards.
- Investigated vehicles failing to return after a run; implemented a timed occupancy check to return unoccupied vehicles.
- Verified the fix in live multiplayer playtesting sessions.

Sticker Puzzles: Match Scenes | Published iOS Game

Independent Unity mobile project

- Built sticker placement, target matching, puzzle completion, and hint interactions.
- Improved placement usability with snapping near matching targets.
